ARRAY
QUESTIONS
BASIC LEVEL

Print Array Elements Reverse linewise

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Take n as an integer input. Declare an array of size n that stores value of int data-type. Then take n integer inputs and store them in the array one by one. Then print the elements of the array from the last index till the 0th index such that each element is printed one by one in each line

Input Format

A number n representing length of array. n elements of an array.

Constraints

$1 \leq n \leq 1000000$ $1 \leq \text{arr}[i] \leq 1000000$

Output Format

See the Description

Sample Input 0

```
5
1
2
3
4
5
```

Sample Output 0

```
5
4
3
2
1
```

Print indexes where array elements are odd

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Take n as an integer input. Declare an array of size n that stores value of int data-type. Then take n integer inputs and store them in the array one by one. Then print all the indexes of the array from the starting where the elements are odd

Input Format

A number n representing length of array. then n elements of array.

Constraints

$1 \leq n \leq 1000000$ $1 \leq \text{arr}[\text{index}] \leq 1000000$

Output Format

See the Description

Sample Input 0

Count_Even

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Given an integer n , the task is to define an integer array `arr[]` of size n & Print the Count Number of even elements in the array.

Input Format

An integer n , which is the size of the array `arr[]` n integers each in a new line, depicting the elements of the array `arr[]`

Constraints

$0 \leq \text{arr.length} \leq 1000$ $0 \leq \text{arr}[i] \leq 1000$

Output Format

Single line of output An integer, which is the number of even numbers in the array.

Sample Input 0

```
5
2
3
4
2
8
```

Sample Output 0

```
4
```

Print First NON MATCHING NUMBER

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Declare the first array of size n that stores values of int data-type. Then take n integer inputs and store them in the array one by one. Then again declare a second array of size n that stores values of int data-type. Then take n integer inputs and store them in the array one by one. Then print the index at which you find the first non matching number in the array.

Input Format

First Int Value N representing Size of array Then N Integer values Representing the values of Arr1 Then Again N int values representing the value of arr2

Constraints

NA

Output Format

Idx of arr2 where you find first non matching integer value

Sample Input 0

```
5
10
20
30
40
50

Take n as an integer input. Declare an array of size n that stores value of int data-type.

Then take n integer inputs and store them in the array one by one.

And print each integer in each line.

Input Format

An array `arr` of n elements

Constraints

$1 \leq \text{arr.length} \leq 1000000$ $1 \leq \text{arr}[i] \leq 1000000$

Output Format

Print the array element in different line.

Sample Input 0

```
5

Min_Max_Array

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

1. You are given a number n , representing the count of elements.
2. You are given n numbers.
3. You are required to find the span of input. Span is defined as difference of maximum value and minimum value.

Input Format

A number n n_1 n_2 .. n number of elements

Constraints

$1 \leq n \leq 10^4$ $0 \leq n_1, n_2 \dots n \text{ elements} \leq 10^9$

Output Format

A number representing $\max - \min$

Sample Input 0

```

Print Alternate Array Elements Linewise

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Take n as an integer input. Declare an array of size n that stores value of int data-type. Then take n integer inputs and store them in the array one by one. Then print the alternate elements of the array starting from the 0th index

Input Format

a number n represents the length of the array. n elements of an array

Constraints

$1 \leq n \leq 1000000$

Output Format

See the Description

Sample Input 0

Print 2d Array

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

1. You are given a number n , representing the number of rows.
2. You are given a number m , representing the number of columns.
3. You are given $n*m$ numbers, representing elements of 2d array a .
4. You are required to display the contents of 2d array as suggested by output format below.

Input Format

A number n A number m e_{11} e_{12} .. e_{21} e_{22} $n * m$ number of elements

Constraints

$1 \leq n \leq 10^2$ $1 \leq m \leq 10^2$ $-10^9 \leq e_1, e_2, .. n * m \text{ elements} \leq 10^9$

Output Format

Discussions

1. You are given a number n_1 , representing the number of rows of 1st matrix.
2. You are given a number m_1 , representing the number of columns of 1st matrix.
3. You are given $n_1 * m_1$ numbers, representing elements of 2d array a_1 .
4. You are given a number n_2 , representing the number of rows of 2nd matrix.
5. You are given a number m_2 , representing the number of columns of 2nd matrix.
6. You are given $n_2 * m_2$ numbers, representing elements of 2d array a_2 .
7. If the two arrays representing two matrices of dimensions $n_1 * m_1$ and $n_2 * m_2$ can be multiplied, display the contents of prd array as specified in output Format.
8. If the two arrays can't be multiplied, print "Invalid input".

Input Format

A number n_1

A number m_1

e_{11}

$e_{12}..$

e_{21}

$e_{22}..$

.. $n_1 * m_1$ number of elements of array a_1

A number n_2

A number m_2

e'_{11}

$e'_{12}..$

e'_{21}

$e'_{22}..$

.. $n_2 * m_2$ number of elements of array a_2

.. $n2 * m2$ number of elements of array a2

Constraints

See the sample output

Output Format

$1 \leq n1 \leq 10^2$ $1 \leq m1 \leq 10^2$ $-10^9 \leq e11, e12, \dots, n1 * m1$ elements $\leq 10^9$ $1 \leq n2 \leq 10^2$ $1 \leq m2 \leq 10^2$ $-10^9 \leq e11', e12', \dots, n2 * m2$ elements $\leq 10^9$

Print the upper triangle of a matrix.(15 July)

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Print the upper triangle of a matrix.

Input Format

First line contains, m and n depicting the size of the first matrix. m*n Integer values, depicting all the elements of the matrix.

Constraints

$1 \leq m$ and $n \leq 1000$ $-1000 \leq \text{mat}[i][j] \leq 1000$

Output Format

Print the upper triangular matrix

Sample Input 0

```
3
3
3 7 1
6 2 4
7 1 0
```

Sample Output 0

```
3 7 1
0 2 4
0 0 0
```

Print Lower triangular matrix

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Print the lower triangle of a matrix. Starting from 00 index on the upper side and the mn index on the lower side.

Input Format

First line contains, m and n depicting the size of first matrix. m*n Integer values, depicting all the elements of matrix.

Constraints

$1 \leq m$ and $n \leq 1000$

$-1000 \leq \text{mat}[i][j] \leq 1000$

Output Format

Print the Lower triangular matrix.
